

## 1. Getting Started

### 1.1. BeyondAdmin Overview

### 1.2. Start

To get you started with **BeyondAdmin** theme, you should be familiar with **Twitter Bootstrap** which is widely used and most-preferred HTML framework from developers worldwide.

First, open **blank.html** file to know more about the main theme structure. It basically includes the markup that all other pages will include it too.

## 2. HTML Structure

### Header Structure

```
<!------- Head ----->
<head>
  <meta charset="utf-8" />
  <title>Blank Page</title>

  <meta name="description" content="blank page" />
  <meta name="viewport" content="width=device-width, initial-scale=1.0" />
  <meta http-equiv="Content-Type" content="text/html; charset=utf-8" />
  <link rel="shortcut icon" href="assets/img/favicon.png" type="image/x-icon">

  <!--Basic Styles-->
  <link href="assets/css/bootstrap.min.css" rel="stylesheet" />
  <link id="bootstrap-rtl-link" href="" rel="stylesheet" />
  <link href="assets/css/font-awesome.min.css" rel="stylesheet" />
  <link href="assets/css/weather-icons.min.css" rel="stylesheet" />

  <!--Fonts-->
  <link href="http://fonts.googleapis.com/css?family=Open+Sans:300italic,400italic,600italic,700italic,400,600,700,300&subset=latin"
    rel="stylesheet" type="text/css">

  <!--Beyond styles-->
  <link id="beyond-link" href="assets/css/beyond.min.css" rel="stylesheet" />
  <link href="assets/css/demo.min.css" rel="stylesheet" />
  <link href="assets/css/typicons.min.css" rel="stylesheet" />
  <link href="assets/css/animate.min.css" rel="stylesheet" />
  <link id="skin-link" href="" rel="stylesheet" type="text/css" />

  <!--Skin Script: Place this script in head to load scripts for skins and rtl support-->
  <script src="assets/js/skins.min.js"></script>
</head>
<!------- /Head ----->
```

There are 4 different sections in header:

- **Basic Styles**  
Contains all basic styles that is needed to set up BeyondAdmin  
**Note:** you need **bootstrap-rtl-link** if you intend to use RTL direction. otherwise you can remove this link.
- **Fonts**  
You can put links to WebFonts that you want in this section
- **Beyond Styles**  
Contains other styles that is needed to set up BeyondAdmin  
**Note:** you need **skin-link** if you intend to use pre-defined skins in your website.
- **Skin Script**  
Place this script in head to load scripts for skins and rtl support  
Do not use JQuery in skin.js if you want to change this script because this script loads before jquery.

### Body Structure

```

<!------- Body ----->
<body>
  <!------- Loading Container ----->
  <div class="loading-container">...</div>
  <!------- /Loading Container ----->
  <!------- Navbar ----->
  <div class="navbar">...</div>
  <!------- /Navbar ----->
  <!------- Main Container ----->
  <div class="main-container container-fluid">...</div>

  <!-------Basic Scripts----->
  <script src="assets/js/jquery-2.0.3.min.js"></script>
  <script src="assets/js/bootstrap.min.js"></script>

  <!--Beyond Scripts-->
  <script src="assets/js/beyond.min.js"></script>

  <!-------Page Related Scripts----->

  <!-------Google Analytics::Demo Only----->
  <script>...</script>
</body>
<!------- /Body ----->

```

There are 4 different sections in body:

- **Loading Container**  
Loading Markup to show before page loading completes  
**Note:** you can put any html that you like in this section. loading works with your content.
- **Navbar (Top Menu)**  
Header of your page. see colorful top of demo page.
- **Main Container**  
Beside of Page Header and Loading all other html will be in this section. SideBar Menu, Breadcrumbs, Page Header and Page Content.
- **Scripts**  
Place all your desired scripts in this section at the end of page.  
**Note:** All Demo Pages Contains Their Related Scripts in This Section.

## Navabr (Top Menu) Structure

```

<!------- Navbar ----->
<div class="navbar">
  <div class="navbar-inner">
    <div class="navbar-container">
      <!------- Navbar Barnd ----->
      <div class="navbar-header pull-left">...</div>
      <!------- /Navbar Barnd ----->
      <!------- Account Area and Settings ----->
      <div class="navbar-header pull-right">...</div>
      <!------- /Account Area and Settings ----->
    </div>
  </div>
</div>
<!------- /Navbar ----->

```

There are 2 different sections in Navbar:

- **Barnd**  
Your Logo goes here
- **Account Area and Setting**  
Notifications, Messages, Tasks, Account Setting and Skins are here.

## Main-Container Structure

```

<!-- Main Container -->
<div class="main-container container-fluid">
  <!-- Page Container -->
  <div class="page-container">
    <!-- Page Sidebar -->
    <div id="sidebar" class="page-sidebar">...</div>
    <!-- /Page Sidebar -->
    <!-- Page Content -->
    <div class="page-content">...</div>
    <!-- /Page Content -->
  </div>
  <!-- /Page Container -->
</div>
<!-- Main Container -->

```

There are 2 different sections in Main Container:

- **Sidebar Menu**
- **Page Content**

## Page Content Structure

```

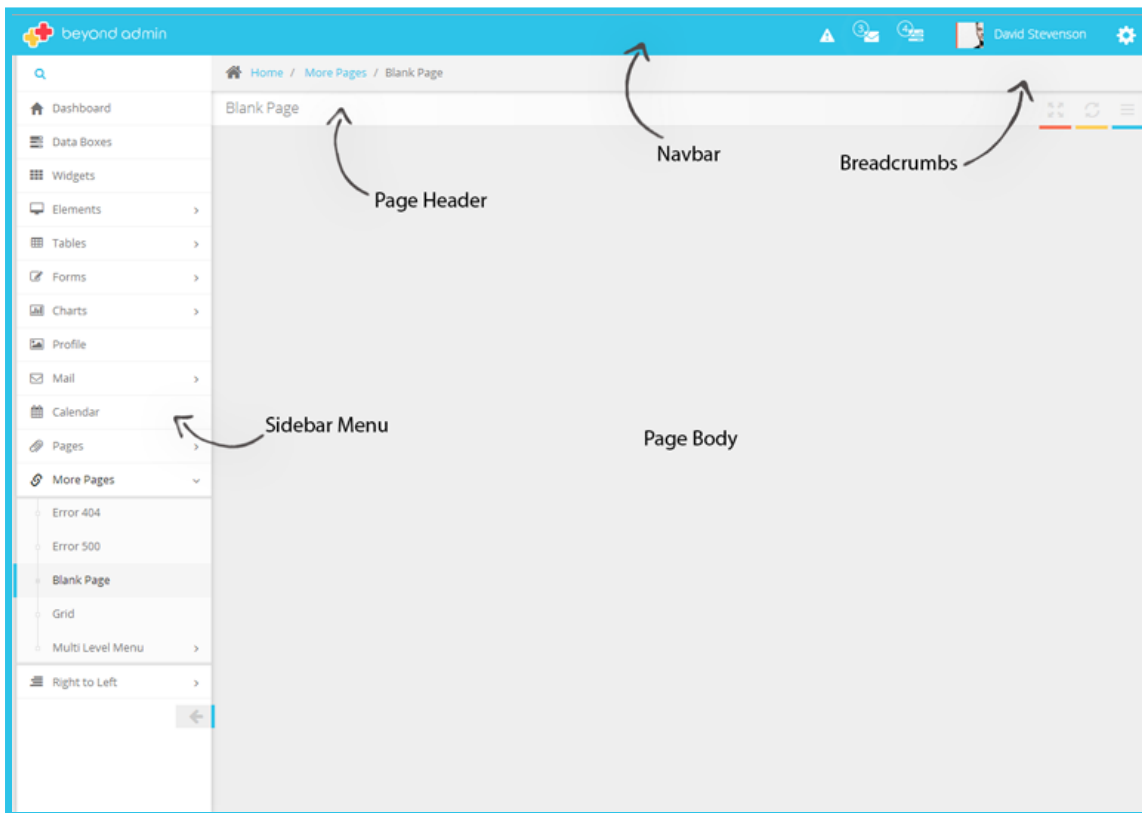

<!-- Page Content -->
<div class="page-content">
  <!-- Page Breadcrumb -->
  <div class="page-breadcrumbs">...</div>
  <!-- /Page Breadcrumb -->
  <!-- Page Header -->
  <div class="page-header position-relative">...</div>
  <!-- /Page Header -->
  <!-- Page Body -->
  <div class="page-body">
    <!-- Your Content Goes Here -->
  </div>
  <!-- /Page Body -->
</div>
<!-- /Page Content -->

```

There are 3 different sections in Page Content:

- **Breadcrumbs**
- **Page Header**
- **Page Body**

## 3. Layout

## 4. Using the Theme

### 4.1. Css Styles

BeyondAdmin is developed using LESS dynamic styling language, and all files are separated to make you more easy to find and customize any part of theme, add or remove parts of CSS that are not needed on your theme.

```
// Variables
@import "beyond-less/variables.less";

// Animations
@import "beyond-less/animations.less";

// Helper Classes
@import "beyond-less/colors.less";
@import "beyond-less/spaces.less";
@import "beyond-less/fonts.less";
@import "beyond-less/helpers.less";

// Body
@import "beyond-less/body.less";

// Typography
@import "beyond-less/typography.less";

/*-----Page Components-----*/
// Navbar
@import "beyond-less/navbar.less";

// Main-Container
@import "beyond-less/main-container.less";

// Sidebar
@import "beyond-less/sidebar.less";

// Page Content
@import "beyond-less/page-content.less";

// Breadcrumbs
@import "beyond-less/breadcrumbs.less";
```

You can remove or customize any of these files for your own good. every component of BeyondAdmin is Completely Separated in JS or CSS and you are able to remove or modify any of these styles.

There are 5 primary colors that you can define in your skin. these colors are:

- themeprimary

- `themesecondary`
- `themethirdcolor`
- `themefourthcolor`
- `themefifthcolor`

All of predefined BeyondAdmin have these colors and you can easily use them like this:

```
<div class="databox-piechart">
  <div data-toggle="easypiechart" class="easyPieChart block-center"
    data-barcolor="themeprimary" data-linecap="butt" data-percent="80" data-animate="500"
    data-linewidth="8" data-size="125" data-trackcolor="#eee">
    <span class="font-200"><i class="fa fa-gift themeprimary"></i></span>
  </div>
</div>
```

As you see you can use classes defined with these colors and also use them in data- attributes for creating charts. every time that you change your skin, all these 5 colors will change based on your skin.

## 5. Credits

**BeyondAdmin** is built with the presence of these great plugins and resources:

- [Twitter Bootstrap](#)
- [FLot Charts](#)
- [Morris.js](#)
- [jQuery Sparklines](#)
- [EASY PIE CHART](#)
- [FullCalendar](#)
- [Google Webfonts](#)
- [Toastr](#)
- [jQuery Knob](#)
- [RTLCS](#)
- [FuelUX](#)
- [Bootstrap Validator](#)
- [jQuery MiniColors](#)
- [noUiSlider](#)
- [jQRangeSlider](#)
- [Font Awesome 4.0.3](#)
- [Typicons](#)
- [Weather Icons](#)
- [Glyphicons](#)
- [jQuery Select2](#)
